

Agrippa sound activated fire door holder

The Agrippa fire door holder can be fitted to safely and legally hold open fire doors. In the event of the fire alarm sounding, the door holder releases the door to prevent the spread of smoke and flames throughout the building. The device is fitted to the wall to protect the fire door and the floor from damage.

How does it work?

1

The Agrippa door holder is battery powered and wire-free. The device is installed at the top of the door.

2

Using 'listen and learn' technology, the device learns the sound of the building's fire alarm.

3

The Agrippa door holder recognises the fire alarm and automatically releases the door, protecting the building.

Features

- Battery powered and wire-free
- Will not hold in the event of a battery power cut
- Hygienically and discreetly installed at the top of the door
- No floor damaged
- No door warping
- LED display and low battery warning
- Daily timed release option to close all fire doors at night
- Red button on unit to manually close fire door

Benefits

- Recognised by UK Fire and Rescue Services and the London Fire Brigade
- Reacts to the sound of the building's specific fire alarm
- Eases access and improves ventilation
- Manufactured in the UK with UK customer service
- Can be fitted anywhere on the door
- Quick installation and easy maintenance
- 12 month warranty

Technical specification

- Battery operated (includes two C-cell batteries)
- L-118mm x W-102mm x D-66mm
- 200N holding force
- Conforms to EN1155
- CE marked through the Construction Products Regulation
- EMC approved
